**“Is Beef Bad  
for The Planet?”**

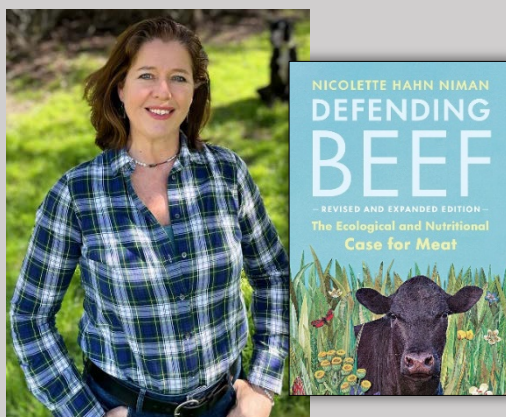

*How would YOU  
respond?*

# “Is Beef Bad for The Planet?”

*How would you respond?*

As a farmer, as a land manager, as someone who cares about our environment—this conference is your opportunity to learn the science of how proper grazing management enhances water quality, benefits wildlife & biodiversity, and sequesters carbon.

You’ll learn how grassland agriculture is actually part of the solution to our global environmental problems. You’ll also be challenged, with cutting-edge research results and honest discussion about the management practices that ensure beef is **GOOD** for us and the environment.

**Nicolette Hahn Niman** is a former vegetarian turned rancher. Once an environmental attorney who fought against the livestock industry, she now writes and travels widely, making the case that beef can be sustainable. Her new book, *Defending Beef*, has just been released.

*Copies of Defending Beef will be available for purchase during the conference at a special discounted price.*

**Alan Franzluebbbers** is a USDA Professor of Soil Ecology with NC State University. Alan will present surprising new research with implications for managing nitrogen on stockpiled fescue. He will also challenge you to develop pasture management practices that improve the water quality and soil health on your farm.

***In Defense of Grassland Agriculture***
